Data Flow Diagram

Date	29 September 2026
Team ID	SWTID-2026-6564
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

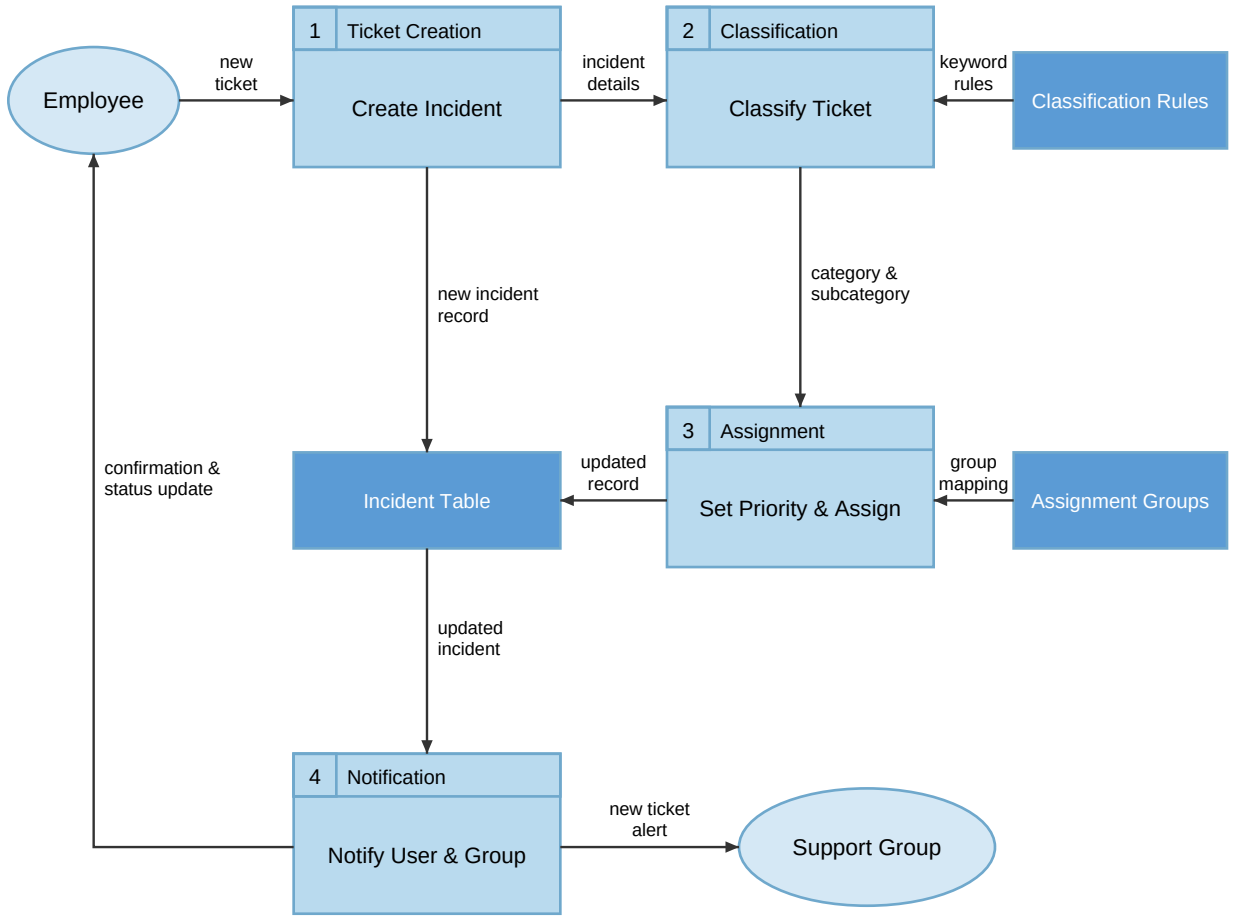
Symbol	Name	Description
Oval / Rounded shape	**External Entity**	A person, organization, or system outside the project that sends or receives data (e.g., Employee, Support Group).
Rectangle with numbered header	**Process**	An activity that transforms incoming data into outgoing data (e.g., Classify Ticket, Set Priority & Assign).
Rectangle (solid fill, no number)	**Data Store**	A place where data is held for later use (e.g., Incident Table, Classification Rules).
Labeled arrow	**Data Flow**	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Elements Used in This DFD

Type	Name	Role in Auto Ticket Classification
External Entity	Employee (Caller)	Raises the ticket and receives confirmation and status updates.
External Entity	Support Group	Receives the alert for a new ticket assigned to it and resolves the issue.
Process 1	Ticket Creation	Creates the incident record from the employee's request.
Process 2	Classification	Flow Designer flow that matches keywords and sets category and subcategory.
Process 3	Assignment	Sets priority and assigns the ticket to the correct group.
Process 4	Notification	Sends notifications to the caller and the assignment group.
Data Store	Incident Table	Holds every incident with its category, priority and group.
Data Store	Classification Rules	Keyword-to-category and subcategory mapping.
Data Store	Assignment Groups	Category-to-assignment-group mapping.

DFD: Auto Ticket Classification using Flow Designer

The diagram below shows how a ticket moves from the employee, through classification and assignment, and back as a notification.



Data Flows

Flow	From	To	Data Passed
F1	Employee	Process 1	New ticket (short description, details, caller)
F2	Process 1	Incident Table	New incident record
F3	Process 1	Process 2	Incident details (flow trigger)
F4	Classification Rules	Process 2	Keyword rules
F5	Process 2	Process 3	Category and subcategory
F6	Assignment Groups	Process 3	Group mapping
F7	Process 3	Incident Table	Updated record (category, priority, group)
F8	Incident Table	Process 4	Updated incident

Flow	From	To	Data Passed
F9	Process 4	Employee	Confirmation and status update
F10	Process 4	Support Group	New ticket alert
