Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-6564
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
Applicant seeking a loan	Secure a loan for property	Married with no co-applicant income	Self-employed with a good credit history	Optimistic about loan approval

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.

Customer Problem Statements for Auto Ticket Classification using Flow Designer:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk agent (L1) handling incoming IT incidents.	Categorize and route each new ticket to the right team quickly.	Tickets arrive with vague descriptions and a wrong or blank category.	Classification is done manually and depends on each agent's judgement.	Overwhelmed and worried about missing SLAs.
PS-2	An employee raising an IT incident.	Get my issue picked up by the right support team without delay.	My ticket is transferred between groups and I get no update.	The wrong category or assignment group is selected at creation.	Frustrated and uncertain about when it will be fixed.
PS-3	An IT support manager responsible for service levels.	Keep ticket handling consistent and SLAs on track.	Urgent tickets sit in general queues and reports are unreliable.	There is no standard, automatic classification and prioritization of tickets.	Concerned and lacking control over service quality.

How the Solution Responds to Each Problem Statement

Problem Statement	How Auto Ticket Classification using Flow Designer addresses it
PS-1	The flow reads the short description when an incident is created and sets category and subcategory automatically, so agents start resolving instead of sorting.
PS-2	Category-to-group rules assign the ticket to the correct group at creation, and a notification confirms receipt and assignment to the employee.
PS-3	Standard rules apply the same classification and priority logic to every ticket, and outage keywords escalate urgent tickets immediately.
