Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-6564
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/project-root
/update-set    - Update Set XML (sys_remote_update_set_a7b40de6fc590ceaad36c.xml)
/screenshots   - Flow, ticket, email and update set screenshots
/tests         - Test tickets and email log results
/docs          - Documentation and screenshots
/demo          - Demo video / walkthrough
README.md      - Setup and run instructions
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://devXXXXX.service-now.com
Login Credentials (Demo)	Username: [demo username] Password: [demo password]
Platform / Hosting Provider	ServiceNow Personal Developer Instance (PDI)
Repository Link	[Repository link]
Demo Video Link	[Demo video link]

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project:

Pre-requisites:

ServiceNow Personal Developer Instance (PDI) with admin access; web browser (Chrome / Edge).

Step 1: Log in to the ServiceNow instance using the URL and demo credentials given in Step 3.

Step 2: Import the Update Set: System Update Sets > Retrieved Update Sets > Import Update Set from XML, then Preview and Commit.

Step 3: Open Flow Designer (All > Process Automation > Flow Designer), open the flow "Auto Classify School IT Tickets" and make sure it is Active.

Step 4: Create a test ticket in the Incident WorkFlow table: select a Caller, enter a Short description (e.g., "My college Has issue with Network"), leave Category empty and Submit.

Step 5: Reopen the ticket and check that Category (Network) and Subcategory (Wi-Fi) are filled automatically.

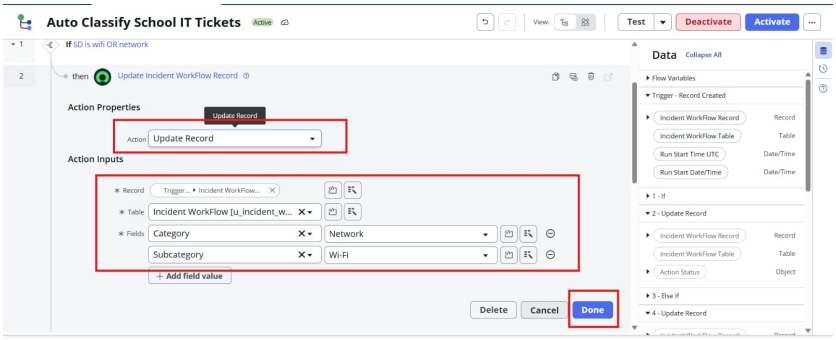

Step 6: Open System Logs > Emails and check the confirmation email "Your Request for the issue has been submitted." Repeat with Projector, Forgot password and Slow computer.

Step 5: Known Issues / Limitations

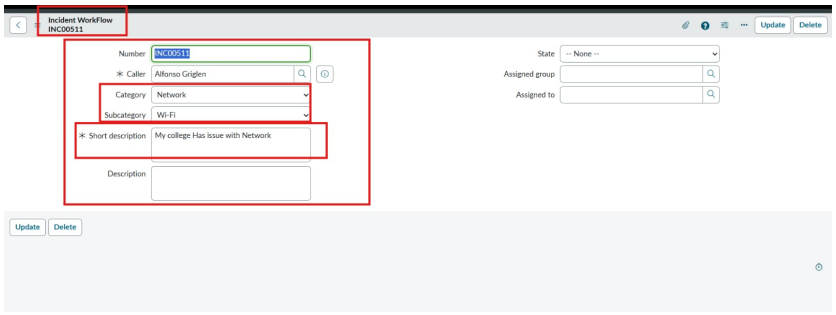

S.No	Known Issue / Limitation	Workaround / Status
1	Only four keyword rules (Wi-Fi / Network, Projector, Forgot password, Slow computer) are defined.	Other issues stay unclassified; more rules can be added in the flow.
2	Assignment group is not set automatically.	Tickets are routed manually; planned as a future enhancement.
3	Runs only on a ServiceNow instance; a PDI may hibernate when idle.	Wake the instance from developer.servicenow.com before testing.

Supporting Screenshots

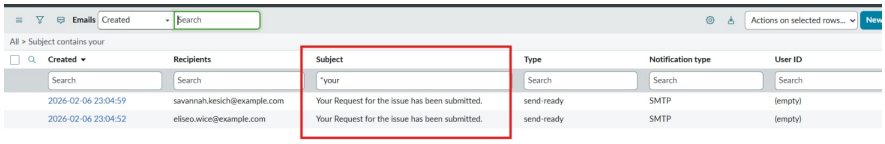

The screenshots below support the checklist items: source code (flow), test results, deployed application and Update Set.

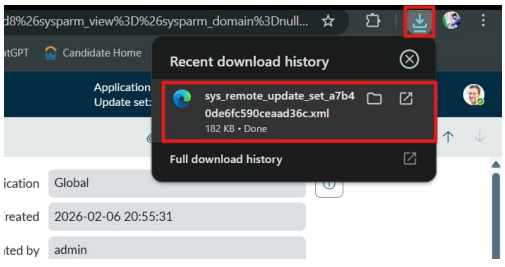

Flow: Update Record sets Category = Network and Subcategory = Wi-Fi (flow Active)

Test result: ticket INC00511 classified as Network / Wi-Fi

Test result: confirmation emails in System Logs > Emails

Update Set XML downloaded
